PROFESSIONAL SUMMARY

I am building the foundations of tomorrows intelligence from the ground up. I am learning C to get an understanding of how algorithms work. I am also using Java and BlueJ to create programs with a good structure.. I am using Python to make sense of data. I look at every line of code as a guess that I need to test. Every set of data is, like a puzzle that I need to figure out. I use logic to come up with new ideas that can predict what will happen.

I really want to turn confusing information into decisions that can change the world. I am working on becoming a data scientist who does not just follow what others do. Comes up with new ideas. My main skills are solving problems with algorithms, programming in ways using C, Python and Java trying out new computer experiments and always trying to push the limits of what machines can do. I am using C, Python and Java to achieve this.

TECHNICAL SKILLS

Languages(Tech)	Python | bluej | Java | C | HTML
DS / AI Tools	Pandas(learning) | Docker | Scikit-learn (Learning) | Jupyter Notebook
Web Stack	Node.js | Express.js | React.js | REST APIs | EJS | HTML/CSS | Bootstrap
Databases	MongoDB | Mongoose | SQL (Basics) | power BI
Dev Tools	Git | GitHub | VS Code | Postman | Docker
Concepts	Basics of C | OOP | DSA (150+ problems) | CRUD Operations | Basics of java | Basics of bluej |
Soft Skills	Analytical Thinking | Problem Decomposition | Team Collaboration | Time Management | Intellectual Grit | Collaborative Experimentation

PROJECTS

STUDYBUDDY- JEE/NEET Adaptive Practice Console Engine NOV-2025

Engineered a fully interactive, console-based C application that drills over 500+ topic-tagged questions across Physics, Chemistry, and Mathematics for JEE/NEET and board prep. Built with dynamic test generation, time-bound mock exams, and a performance analytics module that tracks accuracy by subject—transforming raw grit into measurable progress. Helped a batch of 15 beta users sharpen their testing strategy.

Tech stack: C, File Handling, Data Structures, GCC, VS Code

FIRINGFURY — Physics-Driven First-Person Shooter Sandbox (Unity) MAR-2026

Designed and scripted a rapid-fire FPS arena in Unity using C#, featuring real-time raycasting, hit detection, and enemy AI state machines. Focused on core game loop design, player-weapon physics, and level scripting—showcasing the ability to ship a complete interactive experience from scratch. Benchmarked consistent 60 FPS on entry-level hardware through efficient object pooling and collider optimization.

Tech stack: Unity Engine, C#, Game Objects, Prefabs, Scripting, Git

SORTING ALGORITHM ARENA – C-Backed Benchmarking Laboratory APR-2026

Coded QuickSort, MergeSort, and three other algorithms in raw C; compiled them into executables and called them from a Node.js backend to capture precise CPU timings. Visualized the complexity curves live in a React frontend, proving Big-O through real data — a full-stack systems experiment.

Tech used: C, Node.js, Express, React, REST APIs, Git, VS Code.

Hospital Management Dashboard | MySQL, Power BI

- Designed and implemented a relational MySQL database to store and manage hospital operational data, including patient, doctor, admission, and billing records.
- Developed an interactive Power BI dashboard to analyze key metrics such as patient admissions, bed occupancy, revenue, and departmental performance.
- Utilized Power Query and DAX for data transformation, modeling, and KPI development, enabling data-driven decision-making through dynamic visualizations.

Technologies: MySQL, Power BI, DAX, Power Query, Data Modeling, SQLe

EDUCATION

Bachelor of Technology — Computer Science & Engineering(data science) 2025 – 2029

NIST University, Odisha

CGPA: 8.95 / 10.0 | **Relevant Coursework:** Data Structures & Algorithms

CERTIFICATIONS

PARTICIPATION :

Hackarank Code Sangam
ICADS-26
Docker Workshop
Game Development

COURSES :

Machine Learning Using Python
Ethical Hacking Basics
Introduction To Data Analytics
Introduction To Artificial Intelligence
SQL And Power BI

COMPETITIONS :

Code Crusade 4.0
Cipher Chase
Code Sangam
Avesham
Idea Festival

ACHIEVEMENTS & HIGHLIGHTS

- Solved 150+ DSA problems across arrays, strings, recursion, and tree structures — demonstrating algorithmic thinking critical to data preprocessing and model optimization.
- Designed and deployed two end-to-end full-stack applications independently — showcasing ownership, self-direction, and full software lifecycle execution.
- Pursuing active self-study in Data Science: working through Python for Data Analysis (Pandas, NumPy, Matplotlib) and introductory Machine Learning concepts.
- Secured top 10 in CODE SANGAM
- StudyBuddy Adopted by 15+ JEE/NEET Aspirants: Built a 500-question adaptive practice engine in C that 15 peers actively used for timed mock tests, proving the ability to ship user-focused software from scratch.
- · 60 FPS Performance Milestone in Unity: Optimized an FPS game using object pooling and collider culling to maintain a rock-solid 60 FPS on entry-level hardware — demonstrating real-time systems thinking.
- Hackathon/Competition Ready: Completed a collaborative weekend sprint to ideate, build, and pitch a working prototype (even if informal) — demonstrating cross-functional teamwork under pressure.
- LeetCode: Solved 220+ problems, peak contest rating (top 15%)
- HackerRank: 5-star in Problem Solving , C, Data structure &Python, gold batch earned . Strong foundation in algorithms & data structures validated by 150+ hand-coded solutions in C, Python, and Java.

- Google arcade participant.

LANGUAGES

- English – Professional working Proficiency
- Hindi – conversational
- Odia - Native

HOBBIES

- Peer Teaching & Debugging Sprints
- Competitive Programming Side Quests
- Chess
- Book Reading
